Instructions:

1. Customer Selection:

- Provide a dropdown to select a customer.
- After selecting a customer, auto-populate the following fields:
 - Phone Number
 - Address
 - City
 - State

2. Product Selection:

- **Product Category Dropdown:**
 - After selecting a category, populate the next dropdown with products belonging to that category.
- **Product Dropdown:**
 - Auto-populate the price and calculate the total price of the product with respect to the quantity entered.

Www.profilics.com

3. Total Amount Calculation:

- Display the sub total at the bottom right of the page, which should auto-calculate based on the selected products and quantities (Using Javascript).

Additional Instructions:

1. You can download and import the SQL file from the following link for product and category data.
 - <https://drive.google.com/file/d/16t0RqbHp1jwfIrQOqKSPFluMCpbupE08/view?usp=sharing>
2. Feel free to create additional tables if necessary, and for the customer table, you can manually add some dummy data, so that you can use those customers while creating invoice.
3. The search functionality on the Invoice List Page should be implemented on the backend.
4. On the Invoice Creation Page, client-side validations are required, and adding backend validations as well would be appreciated.
5. Please avoid using **ChatGPT** or any **AI** tools. You are allowed to use Google for basic searches.
